

SUPA BLACK 2000

Supa Black is a new coating for mining fittings that provides outstanding levels of ductility and corrosion resistance.

By significantly extending the service life of fittings and minimising maintenance downtime, Supa Black provides an ideal cost effective solution for harsh environment applications.

Offering up to 2,000 hours to red rust under salt spray test conditions, Supa Black outlasts traditional zinc plated finishes by up to three times.

In addition, the excellent ductility of the coating maintains this exceptional performance, even after crimping or swaging, as it is not prone to the cracking or flaking that can affect other coating types.

KEY BENEFITS

- Up to 2,000 hours to red rust
- Excellent ductility
- Uniform coating
- Good thermal stability
- Unique appearance
- Galvanic corrosion resistance
- Superior abrasion performance
- High volume production process
- Extends service life up to 3 times

Salt Spray Test

(ASTM B117, BS 7479, ISO 9227, NS DIN 5002)
