

HIGH-QUALITY CUTTING FOR EVEN THE TOUGHEST HOSE

Manuli Hydraulics is always on the lookout for ways to improve both the efficiency and the quality of new and existing production operations. With this in mind we have reassessed our cutting equipment offering.

As a market leader in hydraulic hoses and assembly machines, we wanted to offer a better quality cut, a longer life cycle and less noise on our assembly equipment.

After many hours of field testing, we believe that we have found the best solution for our partners: a new cutting blade which is proven to provide an extended operational life of up to 2 times that of the current blade, a very clean cut and up to 50% noise decrease.

As a result of this upgrade the 400 mm and 520 mm blades (including the OEM blade) will be replaced by these new blades immediately (400 mm blade - p/n: 3022536, 520 mm blade - p/n: 3022531).

Contact your Manuli Hydraulics representative now to find out more about this and the rest of our assembly equipment range.
