

MANULI HYDRAULICS RELOCATE EUROPEAN DISTRIBUTION HUB

As part of our strategic plan to further improve the effectiveness and efficiency of our supply chain and logistics functions, Manuli Hydraulics will soon relocate our European Distribution Hub from Bodenheim, Germany, to a 11,500m² facility in Legnica, Poland.

This move allows us to streamline our logistics processes by taking advantage of the new hub's closer proximity to our two main European production locations in Radomsko and Myslowice, Poland.

"The choice of location for our central warehouse in Poland was preceded by a wide analysis of locations throughout Poland. We finally decided on Legnica due to the proximity to the German border and the ease of supply within Lower and Upper Silesia voivodeship and the rest of the country. The decision to lease a warehouse space in the selected facility was influenced by the fact that it was possible to adapt the area to our individual needs."

David Sincholle,
Operations Director
Manuli Hydraulics
