

# FAST-FIT NOW WITH E-COAT 1000

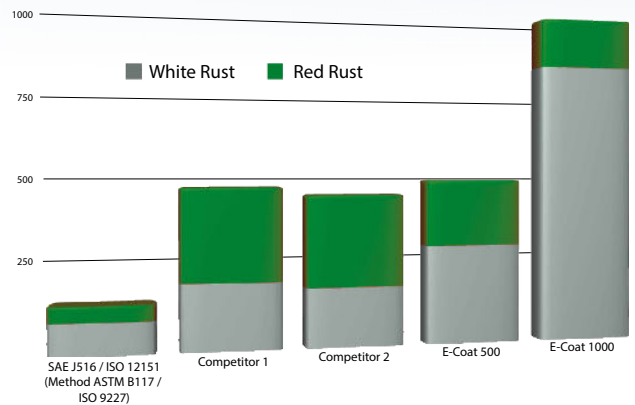

IMPROVED PERFORMANCE & RELIABILITY

Manuli Hydraulics is globally renowned for the quality, performance and reliability of its hydraulic connectors. However, even the best products can still be made better and as technologies develop there is often the opportunity to further improve our products.

For this reason we have upgraded our **FastFit** range of smart fittings to have **E-Coat 1000** plating as standard.

## E-COAT 1000 FEATURES:

- High corrosion resistance in crimped conditions
- Enhanced performance of corrosion resistance compared to the standard E-Coat 500 plating (over 1,000 hours before red corrosion in standard salt spray test conditions ASTM B117 and ISO 9227\*)
- Higher resistance to abrasion and handling than standard plating
- Full compliance with the European Directives REACH 1907/2006/EC, RoHS 2011/65/EC, ELV 2000/53/EC

## ABOUT FASTFIT

FastFit is a “one plug” connection consisting of a male half integrated onto the hose and then inserted into a female cartridge. This easy and safe operation does not require any tools for assembly and allows easy installation in restricted areas or in complex configurations.

FastFit comes in a wide range of cartridges with direct connection on most standard ports, including BSP, SAE, METRIC and NPTF.

## HOW TO ORDER

The standard catalogue ordering codes for FastFit will now come with E-Coat 1000 plating.
